The new “2022 Single-Use Ophthalmic Surgical Products Market Report” examines the past year’s slight sales growth, which was limited due to the continued effects of COVID-19 and staffing difficulties at surgery centers.

The report looks at the continued growth of disposable products, despite widespread concerns about surgical product waste. Our analysis demonstrates the importance of cross-merchandising strategies used to sell multiple single-use instrument product lines and also examines the decline of cross-merchandising over the past few years.
